

Agile: Values and Principles

Jinisha Kataria

Agile Values

- a.) Individuals and interactions over processes and tools.
- b.) Working software over comprehensive documentation.
- c.) Customer collaboration over contract negotiation.
- d.) Responding to change over following the plan.

Agile Principles

Customer Satisfaction-Satisfy the **customer** through early and continuous delivery of valuable software.

Changing Requirements-Welcome **changing requirements**, even late in development.

Frequent Delivery-Deliver working software frequently, with a preference for **shorter timescales**.

Collaborate-**Collaborate** daily between business people and developers throughout the project.

Motivated Individuals- Build projects around **motivated individuals**. Give them the environment and support they need and trust them to get the job done.

F2F Communication- Use **face-to-face** communication whenever possible.

Working Software- **Working software** is the primary measure of progress.

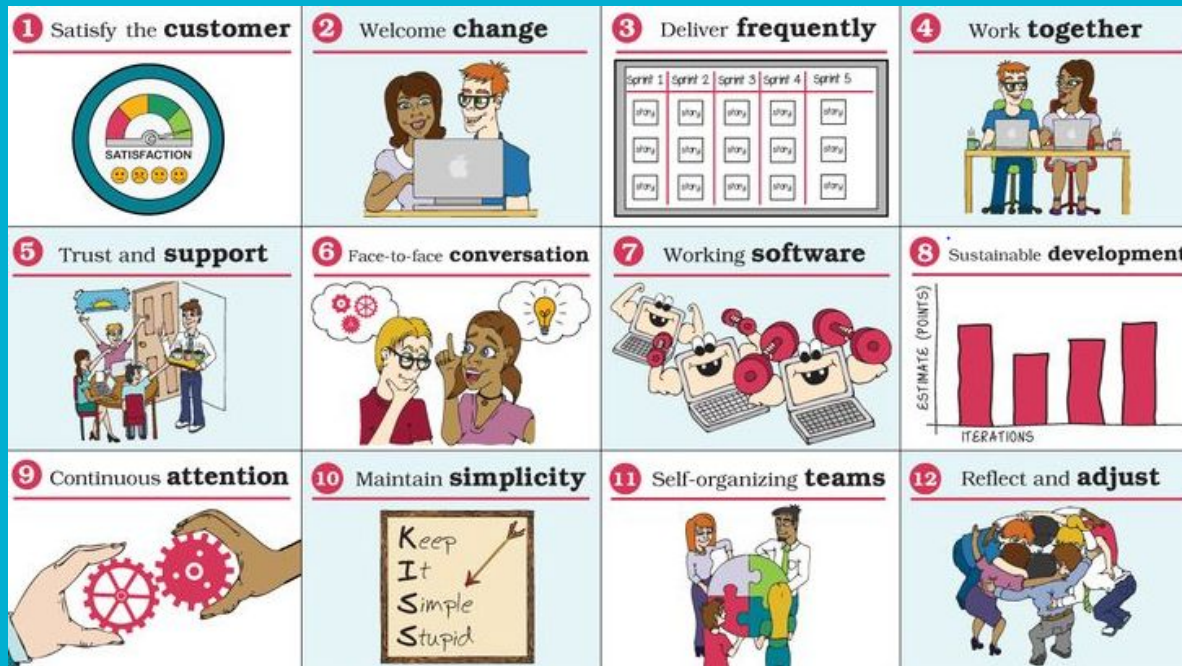

Sustainable Development- Agile processes promote **sustainable development**. The sponsors, developers, and users should be able to maintain a constant pace indefinitely.

Technical Excellence- Continuous attention to **technical excellence** and good design enhances agility.

Simplicity- the art of maximizing the amount of work not done—is essential.

Architecture- The **best architectures**, requirements, and designs emerge from self-organizing teams.

Effective- At regular intervals, the team reflects on how to become more **effective**, then tunes and adjusts its behavior accordingly.‖

Thank You
